

**AMENDMENTS TO THE CLAIMS**

Please amend the claims so that they read as follows:

Claims 1-12 (Canceled)

Claim 13 (Currently Amended): A method for ~~preparing a subcutaneously deliverable biologically active agent~~ subcutaneously administering a biologically active agent, said method comprising:

(a) providing a biologically active agent which can exist in a native conformational state, a denatured conformational state, and an intermediate conformational state which is reversible to said native state and is conformationally between said native and denatured states; and

(b) exposing said biologically active agent to a complexing perturbant to reversibility transform said biologically active agent to said intermediate state and to form a subcutaneously deliverable supramolecular complex, and

(c) subcutaneously administering said supramolecular complex

said perturbant having a molecular weight ranging from about 150 to about 600 daltons, and having at least one hydrophilic moiety and at least one hydrophobic moiety,

said supramolecular complex comprising said perturbant non-covalently complexed with said biologically active agent; and

said biologically active agent not forming a microsphere with said perturbant;

wherein said perturbant is in an amount effective for subcutaneous delivery of said biologically active agent.

Claim 14 (Original): A method as defined in claim 13, wherein said intermediate state has  $\Delta G$  ranging from about -20 kcal/mole to about 20 kcal/moles relative to said native state.

Claim 15 (Original): A method as defined in claim 13, wherein said biologically active agent is selected from the group consisting of a peptide, a micropolysaccharide, a carbohydrate, a lipid, a pesticide, or any combination of the foregoing.

Claim 16 (Previously Presented): A method as defined in claim 15, wherein said biologically-active agent is selected from the group consisting of human growth hormone, bovine growth hormone, growth hormone-releasing hormone, an interferon, interleukin-II, insulin, heparin, calcitonin, erythropoietin, atrial naturetic factor, an antigen, a monoclonal antibody, somatostatin, adrenocorticotropin, gonadotropin releasing hormone, oxytocin, vasopressin, cromolyn sodium, vancomycin, desferrioxamine (DFO), low molecular weight heparin, antimicrobials, or any combination of any of the foregoing.

Claim 17 (Original): A method as defined in claim 13, wherein said perturbant comprises a proteinoid.

Claim 18 (Original): A method as defined in claim 13, wherein said perturbant is selected from the group consisting of an acylated amino acid and an acylated poly amino acid.

Claim 19 (Original): A method as defined in claim 13, wherein said perturbant is selected from the group consisting of a sulfonated amino acid and a sulfonated poly amino acid.

wherein R is C<sub>1</sub> to C<sub>24</sub> alkyl, C<sub>2</sub> to C<sub>24</sub> alkenyl, C<sub>3</sub> to C<sub>10</sub> cycloalkyl, C<sub>3</sub> to C<sub>10</sub> cycloalkenyl, phenyl, naphthyl, (C<sub>1</sub> to C<sub>10</sub> alkyl)phenyl, (C<sub>2</sub> to C<sub>10</sub> alkenyl)phenyl, (C<sub>1</sub> to C<sub>10</sub> alkyl)naphthyl, (C<sub>2</sub> to C<sub>10</sub> alkenyl)naphthyl, phenyl(C<sub>1</sub> to C<sub>10</sub> alkyl), phenyl(C<sub>2</sub> to C<sub>10</sub> alkenyl), naphthyl(C<sub>1</sub> to C<sub>10</sub> alkyl) and naphthyl(C<sub>2</sub> to C<sub>10</sub> alkenyl);

R being optionally substituted with C<sub>1</sub> to C<sub>10</sub> alkyl, C<sub>2</sub> to C<sub>10</sub> alkenyl, C<sub>1</sub> to C<sub>4</sub> alkoxy, -OH, -SH, -CO<sub>2</sub>R<sup>1</sup>, C<sub>3</sub> to C<sub>10</sub> cycloalkyl, C<sub>3</sub> to C<sub>10</sub> cycloalkenyl, heterocyclic having 3-10 ring atoms wherein the hetero atom is one or more atoms of N, O, S or any combination thereof, aryl, (C<sub>1</sub> to C<sub>10</sub> alkyl)aryl, aryl(C<sub>1</sub> to C<sub>10</sub>)alkyl, or any combination thereof;

R being optionally interrupted by oxygen, nitrogen, sulfur, or any combination thereof; and

R<sup>1</sup> is hydrogen, C<sub>1</sub> to C<sub>4</sub> alkyl or C<sub>2</sub> to C<sub>4</sub> alkenyl; or

a salt thereof.

Claim 32 (Currently Amended): The method of claim 23, wherein said biologically active agent is introduced to ~~A dosage unit form comprising:~~

\_\_\_\_\_ (A) ~~a composition as defined in claim 23; and~~

\_\_\_\_\_ (B) (a) an excipient,

(b) a diluent,

(c) a disintegrant,

(d) a lubricant,

(e) a plasticizer,

(f) a colorant,

Claim 34 (Original): A method as defined in claim 33, wherein said biologically active agent comprises a peptide and said mimetic comprises a peptide mimetic.

Claim 35 (Currently Amended): A method for ~~preparing an agent which is capable of being administered~~ subcutaneously administering a biologically active agent, ~~by the subcutaneous route to a subject in need of said agent,~~ said method comprising:

- (a) providing a biologically active agent which can exist in a native conformational state, a denatured conformational state, and an intermediate which is reversible to said native state and is conformationally between said native and denatured states;
- (b) exposing said biologically active agent to a perturbant to reversibly transform said biologically active agent to said intermediate state, wherein said perturbant is in an amount effective for subcutaneous delivery of said biologically active agent; and
- (c) preparing a mimetic of said intermediate state, and
- (d) subcutaneously administering said mimetic.

Claim 36 (Original): A method as defined in claim 35, wherein said perturbant comprises a pH changing agent, an ionic strength changing agent, or guanidine hydrochloride.

Claims 37-49 (Canceled)

Claim 50 (Currently Amended): A method for sublingually administering ~~preparing~~ a ~~sublingually administrable~~ biologically active agent, said method comprising:

Claim 53 (Previously Presented): A method as defined in claim 52, wherein said biologically-active agent is selected from the group consisting of human growth hormone, bovine growth hormone, growth hormone-releasing hormone, an interferon, interleukin-II, insulin, heparin, calcitonin, erythropoietin, atrial natriuretic factor, an antigen, a monoclonal antibody, somatostatin, adrenocorticotropin, gonadotropin releasing hormone, oxytocin, vasopressin, cromolyn sodium, vancomycin, desferrioxamine (DFO), low molecular weight heparin, antimicrobials, or any combination of any of the foregoing.

Claim 54 (Original): A method as defined in claim 50, wherein said perturbant comprises a proteinoid.

Claim 55 (Original): A method as defined in claim 50, wherein said perturbant is selected from the group consisting of an acylated amino acid and an acylated poly amino acid.

Claim 56 (Original): A method as defined in claim 50, wherein said perturbant is selected from the group consisting of a sulfonated amino acid and a sulfonated poly amino acid.

Claim 57 (Original): A method as defined in claim 50, wherein said perturbant is selected from the group consisting of an acylated aldehyde of an amino acid and an acylated aldehyde of a poly amino acid.

Claim 70(Currently Amended): A method for ~~preparing~~ sublingually administering an agent ~~which is capable of being administered by the sublingual route~~ to a subject in need of said agent, said method comprising:

(a) providing a biologically active agent which can exist in a native conformational state, a denatured conformational state, and an intermediate conformational state which is reversible to said native state and is conformationally between said native and denatured states;

(b) exposing said biologically active agent to a complexing perturbant to reversibly transform said biologically active agent to said intermediate state and to form a sublingually administrable supramolecular complex,

said perturbant having a molecular weight between about 150 and about 600 daltons, and having at least one hydrophilic moiety and one hydrophobic moiety,

said supramolecular complex comprising said perturbant non-covalently complexed with said biologically active agent, and

said biologically active agent not forming a microsphere with said perturbant;

wherein said perturbant is in an amount effective for sublingual delivery of said biologically active agent; and

(c) preparing a mimetic of said supramolecular complex, and

(d) sublingually administering said mimetic.

Claim 71 (Original): A method as defined in claim 70, wherein said biologically active agent comprises a peptide and said mimetic comprises a peptide mimetic.

Claim 101 (Currently Amended): ~~A composition~~ A method as defined in claim 97, wherein said perturbant is selected from the group consisting of an acylated amino acid and an acylated poly amino acid.

Claim 102 (Currently Amended): ~~A composition~~ A method as defined in claim 97, wherein said perturbant is selected from the group consisting of a sulfonated amino acid and a sulfonated poly amino acid.

Claim 103 (Currently Amended): ~~A composition~~ A method as defined in claim 97, wherein said perturbant is selected from the group consisting of an acylated aldehyde of an amino acid and an acylated aldehyde of a poly amino acid.

Claim 104 (Currently Amended): ~~A composition~~ A method as defined in claim 97, wherein said perturbant is selected from the group consisting of an acylated ketone of an amino acid and an acylated ketone of a poly amino acid.

Claim 105 (Currently Amended): ~~A composition~~ A method as defined in claim 97, wherein said perturbant comprises a carboxylic acid having the formula

wherein R is C<sub>1</sub> to C<sub>24</sub> alkyl, C<sub>2</sub> to C<sub>24</sub> alkenyl, C<sub>3</sub> to C<sub>10</sub> cycloalkyl, C<sub>3</sub> to C<sub>10</sub> cycloalkenyl, phenyl, naphthyl, (C<sub>1</sub> to C<sub>10</sub> alkyl)phenyl, (C<sub>2</sub> to C<sub>10</sub> alkenyl)phenyl, (C<sub>1</sub> to C<sub>10</sub> alkyl)naphthyl, (C<sub>2</sub> to C<sub>10</sub> alkenyl)naphthyl, phenyl(C<sub>1</sub> to C<sub>10</sub> alkyl), phenyl(C<sub>2</sub> to C<sub>10</sub> alkenyl), naphthyl(C<sub>1</sub> to C<sub>10</sub> alkyl) and naphthyl(C<sub>2</sub> to C<sub>10</sub> alkenyl);

R being optionally substituted with C<sub>1</sub> to C<sub>10</sub> alkyl, C<sub>2</sub> to C<sub>10</sub> alkenyl, C<sub>1</sub> to C<sub>4</sub> alkoxy, -OH, -SH, -CO<sub>2</sub>R<sup>1</sup>, C<sub>3</sub> to C<sub>10</sub> cycloalkyl, C<sub>3</sub> to C<sub>10</sub> cycloalkenyl, heterocyclic having 3-10 ring atoms wherein the hetero atom is one or more atoms of N, O, S or any combination thereof, aryl, (C<sub>1</sub> to C<sub>10</sub> alkyl)aryl, aryl(C<sub>1</sub> to C<sub>10</sub>)alkyl, or any combination thereof;

R being optionally interrupted by oxygen, nitrogen, sulfur, or any combination thereof; and

R<sup>1</sup> is hydrogen, C<sub>1</sub> to C<sub>4</sub> alkyl or C<sub>2</sub> to C<sub>4</sub> alkenyl; or

a salt thereof.

Claim 106 (Currently Amended): ~~A dosage unit form comprising~~ A method as defined in claim 93, wherein said biologically active is introduced to ~~further comprises:~~

~~(A) — a composition as defined in claim 97; and~~

- (B)
- (a) an excipient,
  - (b) a diluent,
  - (c) a disintegrant,
  - (d) a lubricant,
  - (e) a plasticizer,
  - (f) a colorant,
  - (g) a dosing vehicle, or
  - (h) any combination thereof.

Claim 107 (Currently Amended): A method for ~~preparing an agent which is capable of being administered by the intranasal route~~ intranasally administering a biologically active agent

to a subject in need of said agent, said method comprising:

(a) providing a biologically active agent which can exist in a native conformational state, a denatured conformational state, and an intermediate conformational state which is reversible to said native state and is conformationally between said native and denatured states;

(b) exposing said biologically active agent to a complexing perturbant to reversibly transform said biologically active agent to said intermediate state and to form an intranasally administrable supramolecular complex,

said perturbant having a molecular weight between about 150 and about 600 daltons, and having at least one hydrophilic moiety and one hydrophobic moiety,

said supramolecular complex comprising said perturbant non-covalently complexed with said biologically active agent, and

said biologically active agent not forming a microsphere with said perturbant;

wherein said perturbant is in an amount effective for intranasal delivery of said biologically active agent; and

(c) preparing a mimetic of said supramolecular complex, and

(d) intranasally administering said supramolecular complex.

Claim 108 (Original): A method as defined in claim 107, wherein said biologically active agent comprises a peptide and said mimetic comprises a peptide mimetic.

Claim 109(Currently Amended): A method for ~~preparing an~~ intrasally  
administering a biologically active agent which is capable of being administered by the intranasal  
route to a subject in need of said agent, said method comprising:

- (a) providing a biologically active agent which can exist in a native conformational state, a denatured conformational state, and an intermediate which is reversible to said native state and is conformationally between said native and denatured states;
- (b) exposing said biologically active agent to a perturbant to reversibly transform said biologically active agent to said intermediate state, wherein said perturbant is in an amount effective for intranasal delivery of said biologically active agent; and
- (c) preparing a mimetic of said intermediate state, and
- (d) intranasally administering said biologically active agent.

Claim 110 (Original): A method as defined in claim 109, wherein said perturbant comprises a pH changing agent, an ionic strength changing agent, or guanidine hydrochloride.

**Claim 111 (Canceled ).**

Claim 112 (Previously Presented): The method of claim 128, wherein the biologically active agent is human growth hormone.

Claim 113 (Previously Presented): The method of claim 128, wherein the biologically active agent is growth-hormone releasing hormone.

Claim 114 (Previously Presented): The method of claim 128, wherein the biologically active agent is insulin.

Claim 115 (Previously Presented): The method of claim 128, wherein the biologically active agent is heparin.

Claim 116 (Previously Presented): The method of claim 128, wherein the biologically active agent is low molecular weight heparin.

Claim 117 (Previously Presented): The method of claim 128, wherein the biologically active agent is calcitonin.

Claim 118 (Previously Presented): The method of claim 128, wherein the biologically active agent is cromolyn sodium.

Claim 119 (Previously Presented): The method of claim 128, wherein the biologically active agent is an antimicrobial.

Claim 120 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is human growth hormone.

Claim 121 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is growth-hormone releasing hormone.

Claim 122 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is insulin.

Claim 123 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is heparin.

Claim 124 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is low molecular weight heparin.

Claim 125 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is calcitonin.

Claim 126 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is cromolyn sodium.

Claim 127 (Currently Amended): The ~~composition~~ method of claim 129, wherein the biologically active agent is an antimicrobial.

Claim 128 (Previously Presented): A method as defined in claim 55, wherein said perturbant is an acylated amino acid.

Claim 129 (Currently Amended): A ~~composition~~ method as defined in claim 64, wherein said perturbant is an acylated amino acid.

Claim 130 (Previously Presented): A method as defined in claim 128, wherein the biologically active agent is a peptide.

Claim 131 (Previously Presented): A method as defined in claim 130, wherein the biologically active agent is an interferon.

Claim 132 (Previously Presented): A method as defined in claim 130, wherein the biologically active agent is erythropoietin.

Claim 133 (Previously Presented): A method as defined in claim 130, wherein the biologically active agent is an antigen.

Claim 134 (Currently Amended): A ~~composition~~ method as defined in claim 129, wherein the biologically active agent is a peptide.

Claim 135 (Currently Amended): A ~~composition~~ method as defined in claim 134, wherein the biologically active agent is an interferon.

Claim 136 (Currently Amended): A ~~composition~~ method as defined in claim 134, wherein the biologically active agent is erythropoietin.

Claim 137 (Currently Amended): A ~~composition~~ method as defined in claim 134, wherein the biologically active agent is an antigen.

Claim 138 (Currently Amended): A ~~composition~~ method as defined in claim 18, wherein said perturbant is an acylated amino acid.

Claim 139 (Previously Presented): The method of claim 138, wherein the biologically active agent is human growth hormone.

Claim 140 (Currently Amended): The method of claim 138, wherein the biologically active agent is growth-hormone releasing hormone.

Claim 141 (Previously Presented): The method of claim 138, wherein the biologically active agent is insulin.

Claim 142 (Previously Presented): The method of claim 138, wherein the biologically active agent is heparin.

Claim 143 (Previously Presented): The method of claim 138, wherein the biologically active agent is low molecular weight heparin.

Claim 144 (Previously Presented): The method of claim 138, wherein the biologically active agent is calcitonin.

Claim 145 (Previously Presented): The method of claim 138, wherein the biologically active agent is cromolyn sodium.

Claim 154 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is insulin.

Claim 155 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is heparin.

Claim 156 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is low molecular weight heparin.

Claim 157 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is calcitonin.

Claim 158 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is cromolyn sodium.

Claim 159 (Currently Amended): The ~~composition~~ method of claim 151, wherein the biologically active agent is an antimicrobial.

Claim 160 (Currently Amended): A ~~composition~~ method as defined in claim 151,  
wherein the biologically active agent is a peptide.

Claim 161 (Currently Amended): A ~~composition~~ method as defined in claim 160,  
wherein the biologically active agent is an interferon.

Claim 162 (Currently Amended): A ~~composition~~ method as defined in claim 160, wherein the biologically active agent is erythropoietin.

Claim 163 (Currently Amended): A ~~composition~~ method as defined in claim 160, wherein the biologically active agent is an antigen.

Claim 164 (Previously Presented): A method as defined in claim 92, wherein said perturbant is an acylated amino acid.

Claim 165 (Previously Presented): The method of claim 164, wherein the biologically active agent is human growth hormone.

Claim 166 (Previously Presented): The method of claim 164, wherein the biologically active agent is growth-hormone releasing hormone.

Claim 167 (Previously Presented): The method of claim 164, wherein the biologically active agent is insulin.

Claim 168 (Previously Presented): The method of claim 164, wherein the biologically active agent is heparin.

Claim 169 (Previously Presented): The method of claim 164, wherein the biologically active agent is low molecular weight heparin.

Claim 178 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is human growth hormone.

Claim 179 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is growth-hormone releasing hormone.

Claim 180 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is insulin.

Claim 181 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is heparin.

Claim 182 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is low molecular weight heparin.

Claim 183 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is calcitonin.

Claim 184 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is cromolyn sodium.

Claim 185 (Currently Amended): The ~~composition~~ method of claim 177, wherein the biologically active agent is an antimicrobial.

Claim 186 (Currently Amended): A ~~composition~~ method as defined in claim 177, wherein the biologically active agent is a peptide.

Claim 187 (Currently Amended): A ~~composition~~ method as defined in claim 186, wherein the biologically active agent is an interferon.

Claim 188 (Currently Amended): A ~~composition~~ method as defined in claim 186, wherein the biologically active agent is erythropoietin.

Claim 189 (Currently Amended): A ~~composition~~ method as defined in claim 186, wherein the biologically active agent is an antigen.
